Jonathan Pinsky, MD

Dr. Pinsky received his medical degree from St. Georges University School of Medicine. He completed his residency and fellowship at Loyola University Medical Center and has been in practice for over 20 years. Dr. Pinsky practices at Metro Infectious Disease Consultants and is affiliated with several hospitals in the Greater Chicagoland Area. He is board certified in Infectious Disease, and his medical interests include HIV, Bone and Joint Infections, Antibiotic Stewardship, Blood Stream Infections, Cellulitis, Clostridium difficile, Device Infections, Endocarditis and Urinary Tract Infections.

Patrick Moore, MD

Dr. Moore is a board certified in Internal Medicine. He received his undergraduate degree at University of North Carolina at Chapel Hill and his medical degree from Ross University School of Medicine. He completed his residency at East Carolina University, and he is currently in his second year of fellowship in Hematology/Oncology at Loyola University Medical Center. His clinical and research experience includes diagnosis, staging, management and treatment of solid tumors with hematology focus on coagulation, hematologic malignancies, anemias, hemoglobinopathies, and qualitative and quantitative disorders of leukocytes and

Paola Susan, MD

Dr. Susan is a board certified family medicine specialist at Rush University Medical Center. She received her medical degree at Pontifical Xavierian University School of Medicine in Colombia and completed her residency at Saints Mary and Elizabeth Medical Center in Chicago. Some of her clinical expertise includes: asthma, birth control, diabetes, heart disease in women, high cholesterol, lifestyle medicine and newborn and pediatric physical examination. She is deeply passionate about treating the underserved populations—specifically the lesbian, gay, transgender, queer and bisexual communities. One of her biggest victories as a family physician has been to help teenagers coming out to their families.

George Nijmeh, MD

Dr. Nijmeh completed his medical degree, fellowship and residency as Chief Resident in Internal Medicine from the University of Illinois at Chicago. His medical interest include cardiology, cardiac stress testing, echocardiography, transesophageal echocardiography, nuclear cardiology, preventative cardiology, hypertension, heart failure, coronary artery disease, and high cholesterol. He specializes in a variety of cardiology procedures, such as: 2-D Echocardiographic Stress Testing, 24-Hour Holter Monitoring, 30-day Event Monitoring Echocardiography and Cardiac Stress Testing. Dr. Nijmeh is board certified in cardiology, clinical hypertension, echocardiography, internal medicine and nuclear cardiology.

Edward-Elmhurst Health Family Practice Conference

OVERVIEW

On January 31, 2020, Health and Human Services Secretary, declared a public health emergency for the U.S. to aid the nation's healthcare community in responding to COVID-19. The outbreak of respiratory disease caused by the novel coronavirus, COVID19 has caused high morbidity and mortality rates. This activity is designed to furnish providers with the latest information and resources on the virus in order to properly identify and follow CDC protocol for the reporting and management in identified patients.

Most often, leukemia is a cancer of the white blood cells, but some forms of leukemia start in other blood cell types. Leukemia was a deadly condition for many years. However, medical breakthroughs and improved treatments have allowed many patients to be cured of certain types of leukemia. After diagnosis and treatment, many people with leukemia live many good, quality years. This activity is designed to educate providers on the different diagnoses of leukemia types, the varying treatment options, and the process for referral to an appropriate specialist.

There are an estimated 1.4 million transgender adults in the U.S. and Illinois alone has an estimated population of 50K. Their health issues are commonly misunderstood due to lack of exposure, stigma, and even discrimination. This activity is designed to help physicians identify the health disparities in physical care of transgender patients, learn how to emotionally care for transgender patients, ask about gender identity, and use preferred pronouns.

According to the CDC, the prevalence of hypertension is 29.0% and increases with age. Hypertension is a common medical problem that can increase the risk for heart disease and stroke. It is also a culturally based issue. Hypertension prevalence is higher among non-Hispanic black than non-Hispanic white, non-Hispanic Asian, or Hispanic adults. Controlling high blood pressure is still an issue for many adults. This activity is designed to discuss the complex nature of hypertension so providers are aware of how to assist patients in avoiding increased risk, screening and diagnosis guidelines, and the latest available treatment options.
